HyPower Hurricane Weather Base Pedestals: Valuable to Inland Lakes

Claremore, OK, July 31, 2015 – HyPower is a technology-leading manufacturer of power pedestals and has become a premier choice for RV parks and marinas along the coastline. After the Midwest experienced an unprecedented amount of rain this year – HyPower has proved its value with inland lake facilities. Bernice State Park in Oklahoma is located in an area that floods on Grand Lake and has lost their power pedestals on several occasions in previous years before installing HyPower’s PowerPort with the optional “PowerSnap” Weather Base.

Bernice was chosen by Oklahoma Tourism and Recreation for a complete park renovation to include installation of HyPower power pedestals. They made the decision as a trial run for the majority of their state parks to utilize HyPower’s PowerSnap technology, especially those at risk for flooding. The massive rainfall across the Midwest this year was the ultimate test for HyPower.

“We did not lose any pedestals this year,” said Bernice State Park manager, Sherri Burris, “and it definitely saved us time and money compared to previous years.”

By offering unrivaled versatility in a power pedestal that saves time and money on maintenance with flexibility for change and emergencies, more and more RV parks are discovering the advantage of HyPower TotalPower Solutions. The patented HyPower PowerSnap technology found in the PowerPort and EnergyMate power pedestals allows RV parks to quickly service a unit and easily change receptacles as needed, offering invaluable protection, which in turn raises the level of services offered.

“On the coast, near a river or lake, anywhere there is the potential for flooding our PowerPort with the optional PowerSnap Weather Base can protect a park, campground or marina investment,” said Eric Farley, director of HyPower Sales.

“Not only do they save money on repair or replacement of water damaged units, they are the first back in business, keeping the cash flowing while taking care of their customers.”

Mick Webber, president of HydroHoist Marine Group, the parent company of HyPower, states, “This is a great example of how HyPower is a one-stop shop for RV Parks’ electrical needs, for renovation, expansion, or new construction. No matter your size of project, you can take the stress out of planning and implementing while being assured of the value you receive from HyPower and HydroHoist.”
